Front End Developer

November 17, 2016

NASA Astrophysics Data System

Greetings,

I am interested to learn more about the Front-end Developer position and to see if my experience and qualifications meet the requirements to join the NASA Astrophysics Data System team. I meet the basic qualifications for this position:

- Understanding of front-end development
- UX-awareness
- Comfortability collaborating with other developers on a small, agile team
- Critical awareness to solve complex problems

In addition to these qualifications, I am an enthusiastic and motivated person who enjoys challenges and learning new things. Being a part of the ADS team will allow me to collaborate with and learn from some of the best developers in the world. Also, working with NASA has been my dream since childhood.

As a consultant for the Air Force, my main responsibility is to reimagine and revitalize very old webpages. I lead the front-end design and development effort for the Virtual Education Center (AFVEC) and Automated Education Management System (AFAEMS) portals. As a self-taught developer, my passion and interests are in human-computer interaction(s) and I enjoy using my skills to enhance them. My professional experience has fostered skills in leadership and collaboration, user experience design and user interface development.

Should my professional achievements match those desired in a candidate, I look forward to discussing this opportunity with you further.

Please feel free to contact me when it is convenient. Thank you for your consideration and I look forward to hearing from you.

Very Respectfully,
Will Hunter
